

MAP C

(#1.5 Closures and Public Use Limits)

The areas marked on maps A, B, and C are closed by the order of the Superintendent. This closure is based on safety concerns and the nature of the resources within the areas. Geological instability poses hazards to visitors in portions of these areas. Particular resources within the areas are especially vulnerable. Foot traffic alone can cause sufficient erosion to damage resources - a single touch can literally destroy some ancient decorations. Entry to these areas is not for "familiarization" or "curiosity", but to monitor/stabilize impacts and conduct scientific investigations.
